

Project Profile

- **Goal of project**
Design and build a connected home, utilizing intelligent lighting, entertainment automation, multi-room audio and video along with comfort and convenience controls.
- **Designer Challenges**
To create a seamless design utilizing the most up to date technology in a connect home environment, allowing all the homes subsystems to be controlled easily and logically.
- **Certified Manufactures**
 - Control4
 - Triad Audio
 - Honeywell
 - Ubiquity
- **Designer and Installers**
 - Russ Holton -Designer/Project manager
 - Brian McCurdy-Designer/Certified Programmer
 - Leroy Lambert -Installer
 - Mac Lefler -Builder

Custom Connected Home

This custom connected home was designed with the use and implementation of Control4 home automation products. With 25 zones of audio, 10 zones of distributed video, advanced lighting control with comfort and convenience integration, this design took control of all sub-systems in the home. A scalable network runs the infrastructure of all connected devices,

Including: Honeywell security systems, Carrier Infinity HVAC, Lift Master garage doors, Infratech Patio Heaters, Heat&Glo fireplaces, and Hunter Douglas Powerview Shades. Designed with a forward looking mindset that allows for future growth and technical updates. These subsystems work in unison to provide unparalleled, simple control of all systems in the home providing energy saving and easy control from multiple devices.
